

A wide-angle photograph of the Buffalo, New York skyline across a body of water. The sky is blue with scattered white clouds. The water in the foreground is dark blue with gentle ripples. The skyline features various buildings, including a prominent tall skyscraper on the right and several smaller buildings of varying heights and architectural styles. A line of green trees separates the water from the city buildings.

**OUR WATER.  
OUR FUTURE.**

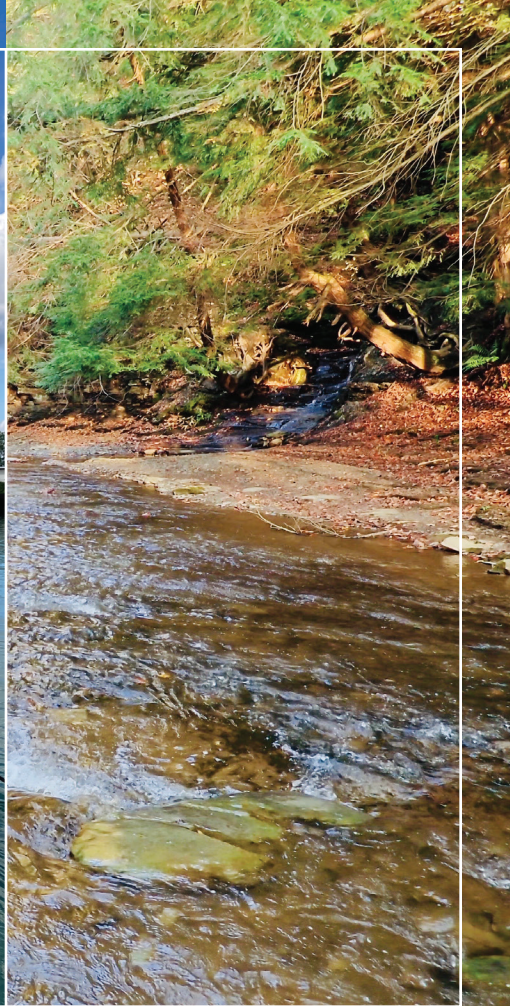

**BUFFALO NIAGARA  
WATERKEEPER®**

## OUR MISSION

Buffalo Niagara Waterkeeper® protects and restores our water and surrounding ecosystems for the benefit of current and future generations. We protect clean water. We restore the health of ecosystems. We connect people to water. We inspire economic growth and community engagement.

OUR INITIATIVES

# WATER QUALITY PROTECTION

We work to protect the physical, biological, and chemical integrity of our creeks, streams, rivers, and lakes to safeguard clean drinking water and conserve healthy, vibrant ecosystems.

We do this through monitoring our waterways, cleaning up historical pollution, preserving critical undeveloped lands, and engaging our community in stewardship of their water.

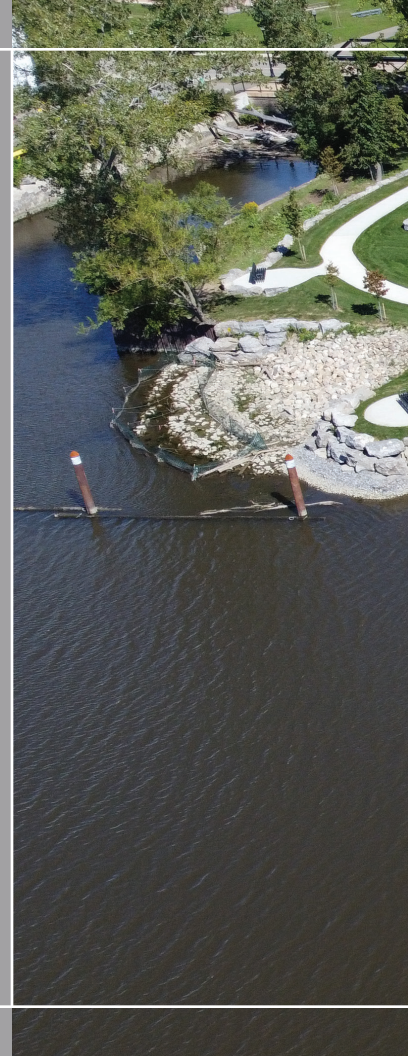

## OUR INITIATIVES

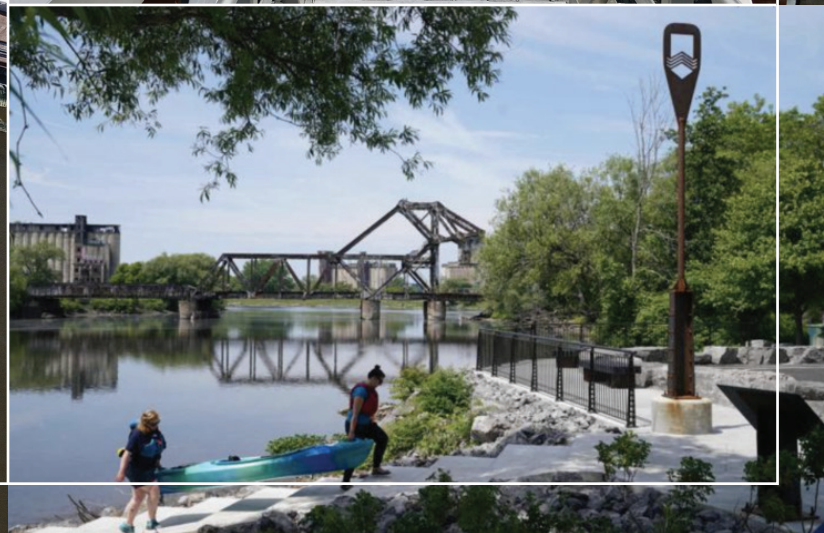

# WATERWAY ACCESS

We establish and restore natural connections to our region's waterways, transforming our water-based economy from rust to blue.

Our efforts enhance communities and public spaces, providing easy and equitable access to our shared waters while creating opportunities for people to interact and reconnect with the natural environment.

## OUR INITIATIVES

# COMMUNITY ENGAGEMENT

We train and educate people in environmental science and stewardship to encourage a new generation of guardians who work to protect WNY's waterways.

Our regionally focused programs provide an immersive experience for youth and adult audiences, resulting in an increased awareness of Great Lakes and local waterway resources and issues.

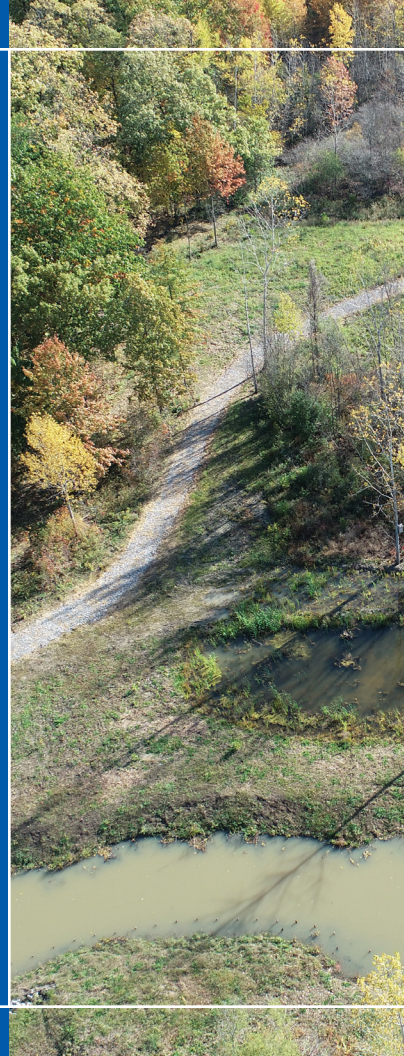

OUR INITIATIVES

# CLIMATE AND COASTAL RESILIENCY

We lead efforts to build community and coastal resiliency in the face of the growing impacts from climate change. We do this through systems-level planning, policy initiatives, and innovative methods to restore degraded habitats and enhance water quality.

Our impact is realized through collaborative public, private and nonprofit partnerships while implementing nature-based solutions to restore critical ecosystem functions and benefits.

## OUR INITIATIVES

# SCAJAQUADA CREEK

We coordinate the efforts of a diverse group of stakeholders and partners in the Scajaquada Creek watershed with the goal of implementing a holistic, community-driven restoration effort of the entire creek system.

We do this through leading restoration projects, meaningfully engaging the community, completing technical and planning studies, and securing funding for implementation of this restoration vision. Through these efforts, Scajaquada Creek will once again become a thriving waterway with healthy habitats and reconnected communities.
